

### CRANE SHUTTLE DOLLY CAR

### CRANE SHUTTLE DOLLY CAR

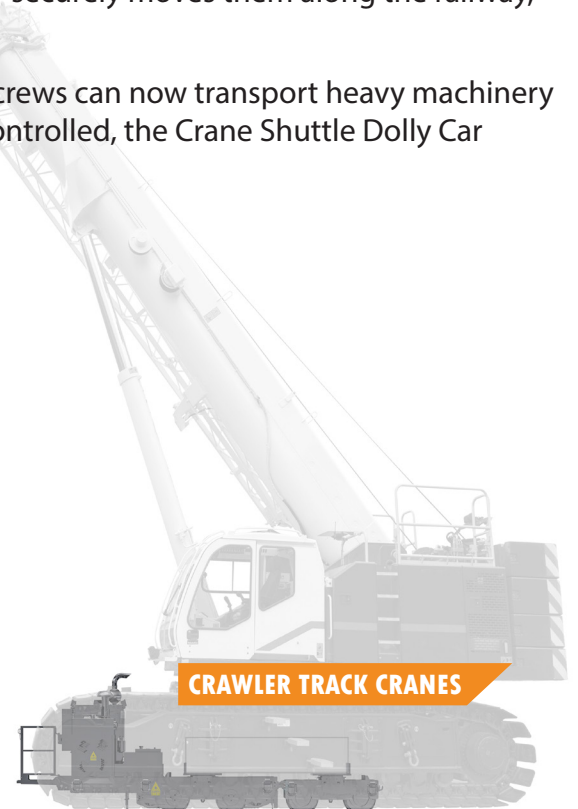

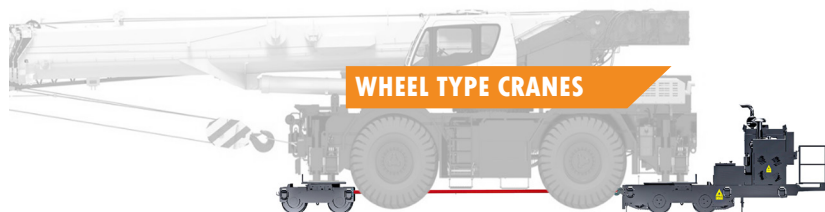

Move massive machinery faster and easier with the **Crane Shuttle Dolly Car** — a powerful rail-based transport system designed for bridge builders, rail projects, and heavy infrastructure jobs.

This hydraulic-driven shuttle car features a dolly that slides underneath wheel or track-type crawler cranes and excavators. The machines lift themselves up, and the dolly securely moves them along the railway, just like a heavy-duty moving cart.

Instead of tearing down equipment or building access roads, crews can now transport heavy machinery efficiently, saving time, cost, and effort. Remote or operator-controlled, the Crane Shuttle Dolly Car simplifies mobilization for the toughest job sites.

### HIGHLIGHTS

- Move 180 tons of equipment with ease.
- Ideal for bridge work, moving heavy equipment, and material and supply delivery.
- Navigate tight or difficult work areas with the compact, 4-axle power unit and dolly.
- Swiveling undercarriage plates adapt quickly to different machines.
- Full air brake system with Cobra friction pads and gladhand connections -- safe, reliable stopping power.
