

RAILWAY CRIBBING BUCKETS

DymaxRail Cribbing Buckets are built tough to withstand wear and tear when working with harsh ballast. High-strength, 8-inch wide cutting edges allow operators to clean mud and ballast from beneath rail ties and sleepers, while twin teeth stab and remove rail ties. When paired with thumbs, operators can easily insert rail ties as well.

KEY FEATURES & BENEFITS

- Two replaceable teeth
- High strength construction
- Machine adapter with pins

OPTIONS

- Custom design solutions available upon request
- Alternate machine adapters such as Wainroy or Wedge Ear hooks or Tiltrotator adapters

Railway Cribbing Buckets are a necessity for almost any contractor or railroad working in track maintenance.

FOR BACKHOES AND EXCAVATORS

Backhoe Loader Cribbing Buckets are available with several tooth kits depending on your requirement. Models are provided with pins for attaching to common pin grab coupler systems. High strength construction and durability.

DymaxRail Cribbing Buckets for excavator machines are 8 inches wide but feature a longer tip radius, more capacity, and tougher construction to withstand higher forces. Shown here with optional thumb.

SPECIFICATIONS

Model Code	Description	Weight (lbs)
DX-BK-CR-8in-BL-10	Bucket-Cribbing-8 Inches Wide-Backhoe Loader-Class 10	320
